

VDL CallPod[®]

Passerelle mounted intercom station

- HD Video
- Intercom
- Networked receiver interface
- On-board and shore side monitoring
- Video recording
- Proximity card reader

The high definition camera gives up to 180° view of the dock for added security and situational awareness.

Digital pan and tilt control enables localised zooming in on areas of interest not visible on conventional cameras, e.g. inspecting the baggage around the caller's feet.

Video and audio may be recorded locally each time the call button is pressed, or when the motion sensor is triggered. If the caller cannot get a response they can leave a recorded message.

Integrated proximity card reader enables crew or guests to alert the access control system. It may be used to disable local alarms, un-locking doors and initiate CCTV.

Supplied with water and shock proof Explorer Case for easy and secure storage on-board.

Options

- Free standing base
- Bespoke engraving and finishes
- Two wire PoE connection
